PERSONAL SUMMARY

I am Computer Science student with hands-on experience in troubleshooting enterprise systems, developing software in Java and C++, and working with databases and web technologies. Experienced in diagnosing system issues, supporting users, and building data-driven applications. Seeking to apply skills in software development and system integration in a collaborative, agile environment.

EDUCATION

08/2022-05/2026 **BS: Computer Science**

Lindenwood University - *Saint Charles, MO*

GPA: 3.67/4.0 - Dean's List

Sibley scholarship recipient* – Lindenwood University's premier undergraduate scholarship for exemplary student leaders. This competitive scholarship recognizes students who exhibit high academic achievement, community service, co-curricular involvement, and leadership.

TECHNICAL SKILLS

- Languages: Java, C++, Python, R, SQL
- Web: HTML, CSS, Bootstrap
- Tools: Git, JIRA (if used), Meraki, Remote Desktop ToolsPython
- Concepts: Data Structures, Multithreading, APIs, Debugging
- Databases: SQL, MySQL

RELEVANT PROJECTS

Assesment Report Generator (Senior Capstone Project)

Technologies: Node.js JavaScript, MySql, HTML/CSS, Agile (scrum)

- Developed a full-stack web application to automate academic assessment reporting, replacing manual spreadsheet-based workflows
- Built a backend using **Node.js** to handle database interactions, API endpoints, and server-side logic
- Designed and normalized a relational database (10+ tables, 3NF) to manage students, courses, assignments, and learning outcomes
- Created RESTful-style endpoints to retrieve, process, and store assessment data
- Implemented data processing logic to analyze student performance and generate structured reports
- Designed user workflows for data entry, assignment evaluation, and report generation
- Collaborated in an Agile team, participating in sprint planning, standups, and iterative delivery
- Identified and mitigated risks related to performance, data security, and system reliability

Data Analysis with R (R, SQL concepts)

- Processed and analyzed large datasets using R to identify trends and performance patterns
- Built regression models to predict flight delays, improving understanding of key variables
- Created visualizations to communicate insights effectively

Web development (HTML, Bootstrap, and CSS)

- Developed a responsive web application with dynamic UI components
- Implemented structured layouts using CSS Grid and Bootstrap
- Optimized performance and SEO to improve load times and visibility

Concurrent Airport Simulation (C++, Multithreading)

- Designed and implemented a multithreaded simulation using pthreads
- Managed shared resources with synchronization to prevent race conditions
- Modeled real-world system constraints (runway access, scheduling conflicts)
- Debugged concurrency issues in a complex, state-driven system

WORK HISTORY

05/2021 to 08/2023

IT Help desk Technician
Lindenwood University

- Diagnosed and resolved software, network, and security issues across campus systems
- Investigated and responded to suspicious account activity, supporting cybersecurity efforts
- Installed, configured, and maintained user environments across multiple platforms
- Utilized tools such as Meraki and remote management systems to troubleshoot issues
- Recognized for outstanding customer service and reliability
